Education

B.Tech in Computer Science & Engineering.

July 2024- Present

Shiksha 'O' Anusandhan (SOA) University, Bhubaneswar , Odisha.

Technical Skills

Networking: TCP/IP, OSI Model, IPv4/IPv6, Subnetting, MAC & IP Addressing, ARP, DNS, DHCP, NAT, HTTP/HTTPS, LAN/WAN, Routing & Switching and network troubleshooting.

Cybersecurity: OSINT, Footprinting, Information Gathering, Enumeration, Vulnerability Assessment, Web Security, OWASP Top 10.

Security Tools: Maltego, SpiderFoot, Nmap, VMware, Kali Linux.

Systems: Linux, Windows, Virtual Machines.

Programming Languages: SQL, Python, Java.

Work Experience - Cybersecurity Intern | Hackerade.

Sep 2026 – Oct 2026

- Performed **OSINT, footprinting, reconnaissance, and enumeration** to identify digital assets and potential attack surfaces.
- Conducted **vulnerability assessment and security analysis**, including practical application of **OWASP Top 10** concepts.
- Used **Maltego, SpiderFoot, Linux/Kali Linux, and Windows** in hands-on cybersecurity labs for information gathering and security investigation.
- Developed **AI-assisted cybersecurity tools and workflows** using ChatGPT and DeepSeek to support security-related tasks.

Projects

1.SOC Log Analyzer | Python, MySQL - [View](#) (Techstack used- python,mySQL) July-Sept 2026

Developed a **SOC-style log analysis system and security dashboard** using Python and MySQL to process **1,000+ simulated authentication logs**. Designed a relational database and implemented **5+ SQL queries** for authentication analysis, log statistics, suspicious IP identification, and security-event monitoring. Automated **brute-force attack detection** and classified events into **LOW, HIGH, and CRITICAL** severity levels. Built a **security dashboard** to visualize authentication activity, failed-login trends, suspicious IPs, and security alerts for faster incident analysis. Identified the **Top 5 IPs** with the highest failed-login attempts and analyzed **722 successful and 278 failed** events.

2.Title Similarity & Compliance Validation System – [View](#)

(Hackathon Project -TEAM OF 5).

February 2026

Developed an **NLP-based title verification system** that analyzes text to identify **semantic similarities, spelling variations, and similar meanings across languages**. Combined NLP with **phonetic matching and rule-based validation** to detect duplicate-like titles, restricted words, title combinations, and periodicity variations, generating a **verification probability score** with **97% accuracy**.

Achievement, Certifications & Extracurricular

1st Prize — 24-Hour Hackathon, XIM University | Among 300+ competitive teams.

IBM SkillsBuild — AI Certification | Cisco Networking Academy — Networking Basics.

Model at Vogue SOA fashion club – performed many inter-college event across different university.
